Proficient Audio Releases F400 On-wall Cinema Speakers

Low profile, sleek design is the perfect compliment to wall-mounted flat panel displays

RIVERSIDE, CA—January 8, 2007—Proficient Audio, a leading provider of speakers and whole-house audio solutions for the Residential Systems market, today announced the release of the F400 On-wall Cinema Speaker. The symmetrical design of the F400 allows for vertical or horizontal mounting, creating an L-C-R cinema system of consistently matched sound character and timbre. F400 On-wall Cinema Speakers are available in Silver or Black models, carefully color-matched to the most popular LCD and plasma displays, with non-reflective textured surfaces. Sold separately, the F400 is available now with an MSRP of \$375.00 US.

Each unit employs dual woofers, with dual bass-reflex large flare ports for low turbulence. A pivoting tweeter allows the user to control the directivity when speakers are mounted off-axis to the listener—often the case with flat-panel display placement. Bass and treble contour switches fine-tune the frequency response to accommodate difficult rooms. Consistent with Proficient Audio's dedication to quality, F400 speaker components are housed in a heavily braced and ribbed, injection molded non-resonant ABS enclosure.
